

Involta Air Gap

What's protecting your backup?

Moving business operations to the cloud is an essential component of a digital migration. But, since the cloud isn't 100% secure, business leaders put backup and recovery solutions into place. That means their data is protected... right? Yes, but what happens when a ransomware attack compromises your backup?

Cybercriminals can stay hidden in your environment for a long time, recording your team's every keystroke. Protect your backup with Involta Air Gap.

Three Tiers of Extra Protection for Your Backup

In addition to security measures already in place – multifactor authentication, backups, password requirements, etc. – securing your data in a completely separate offsite location is critical. A cybercriminal can't access your backups if there's no connection between your environments. The chances of that happening are akin to finding a unicorn and a sasquatch playing badminton in the forest.

Immutable On-Premise

For on-premise customers going to AWS.

- ✔ Data backed up to AWS Immutable S3 bucket – where the client, Involta, or AWS cannot delete data.
- ✔ If data is deleted or compromised, Client has up to 90 days to access and restore from backup.
- ✔ Restoration and testing will be completed on a Time/Expenses basis, and bandwidth required for restore will be charged at actuals.

Immutable Involta IaaS

For Involta Infrastructure as a Service (IaaS) clients going to AWS.

- ✔ Data backed up to AWS Immutable S3 bucket – where the client, Involta, or AWS cannot delete data.
- ✔ If data is deleted or compromised, Client has up to 90 days to access and restore from backup.
- ✔ Restoration and testing will be completed on a Time/Expenses basis, and bandwidth required for restore will be charged at actuals.

Insider Protection

For clients with Veeam console.

- ✔ Data is stored in Involta's cloud environment.
- ✔ If data is deleted or compromised, Involta has 5 days to access and restore from backup.
- ✔ Restoration and testing will be completed on a Time/Expenses basis and restored into a new IaaS VDC or external media sent to the client.

Protect Your Backup

Ransomware attacks target backups, so victims will have to pay large sums to regain access to data. When you protect your Air Gap – the space between your working environment and your backup – you'll stop attackers in their tracks, so you'll never lose access to your data.

Involta helps you Get There with extra layers of backup protection.
